

Vision Lab — Manual QC

Reviewer guide · v1.2 · a 5-minute read

Prefer watching? There's a 5-minute video walkthrough:

loom.com/share/a9d650b0cd654a05893d4c8dc801b5ef

What this tool is

A small panel that appears next to the video player on the Vision Lab platform. You watch a video, rate six quality topics, press **Enter**, and the next video opens automatically. Your reviews are saved instantly and you can download them as an Excel spreadsheet at any time.

You do **not** need any extra account, password, or setup beyond installing the extension once — it uses your normal Vision Lab login.

Installing (one time)

If you were given a Chrome Web Store link: open it, click **Add to Chrome**. Done — updates install themselves.

If you were given a zip file: ① unzip it somewhere you won't delete (e.g. Documents) · ② in Chrome, type **chrome://extensions** in the address bar · ③ switch on **Developer mode** (top-right) · ④ click **Load unpacked** (top-left) and select the unzipped folder.

Reviewing a video

1. Sign in to **vision-lab.linewise.io**, open a project's **Raw Footages**, and click any video. The **Manual QC** panel appears on the right.

2. Press play. **First watch a couple of moments at 0.5× and 1×** — lighting problems, flicker, and motion blur are much easier to see at slow and normal speed. Then switch to 3–4× to skim the rest.

3. Every topic starts at “**No issue.**” Only touch a topic when something is wrong:

Topic	Ask yourself
Lighting	Can I clearly see the hands and the work? (darkness, flicker, backlight)
Sharpness	Is the image crisp enough to follow the work? (grain, blur, focus)
Hand visibility	Are both hands clearly visible while the person works?
FOV / framing	Is the whole task area in the frame, or is work cut off at the edges?
Camera angle	Does the viewpoint show the work clearly — not blocked, not side-on?
Other issue	Anything else wrong (faces identifiable, wrong task, mostly idle, duplicate...)

4. Pick how bad it is:

Rating	Means
No issue	Nothing wrong
Minor	Noticeable, but the footage is still usable
Major	Clearly degrades the footage

Critical

Unusable for training — this disqualifies the video. The test: could anyone learn the task from this clip? If not, it's Critical.

5. When you rate a topic Minor or worse, small **reason buttons** appear (e.g. *Too dark*, *Hands cut off at frame edge*). Tap the one(s) that apply — for Major and Critical at least one is required. Only type a note if the buttons don't cover it.

6. If you can, fill the two optional items: **VL logo visible** (yes/no) and **Environment** (factory / workshop / other).

7. Press **Save & Next** (or just hit **Enter**). Your review is saved and the next unreviewed video opens by itself. The counter at the top shows project progress (e.g. *37/120 reviewed*).

That's the whole loop: **watch** → **tap what's wrong** → **Enter**.

Speed tips

- The rhythm that works: a few seconds at 0.5×–1× to judge image quality, then 4× for the rest to check hands, framing, and idle time. A clean video is a 20-second review — just press Enter.
- Keyboard: keys **1–6** cycle a topic's rating (once = Minor, again = Major, again = Critical, again = back to No issue). **Enter** = save & next · **N** = skip · **`** = hide the panel.
- The verdict (PASS / MINOR ISSUES / MAJOR ISSUES / DISQUALIFIED) is calculated for you — you never choose it directly.
- Two people can work the same project — the tool automatically skips videos the other person already reviewed. The **Next: in order / random** button switches between walking the list and random sampling.
- Drag the panel by its title bar if it covers something. It remembers where you put it.

Getting your work out (Excel)

Export CSV (bottom of the panel) downloads this project's reviews as a spreadsheet — one row per video with the video name, link, all your ratings and reasons. **All** downloads everything you've ever reviewed. The extension's toolbar icon also shows a summary with a download button.

You don't need to send these files anywhere routinely — reviews sync to our database automatically. The CSV is your own copy for checking your work.

If something looks wrong

Problem	Fix
Panel doesn't appear	Make sure you're on a video page (not the list). Refresh the tab.
"Not signed in to Vision Lab"	Log in to the platform in this tab, then refresh.
"Saved on this computer... will sync later"	Normal — your review is safe and uploads automatically.
Made a mistake on a saved video	Open that video again — your review loads back; change it and save again.

Questions, or a video you're unsure about? Message Sahdev with the video link (copy it from the address bar — it's also in your CSV).
